

How to use the iLearnRW Reader

1.1 Login

When you open the reader the first screen you will see is the login screen. Please enter the login details that were provided for the child you are working with and click 'Login'.

If you check the Remember me box these details will be automatically filled in for next time you open the reader.

If you struggle to connect to the internet then you can use the "offline" mode as long as the user has logged in at least once on this tablet.

1.2 My Library

06 Canals	07 Rice
08 Whisky	09 Herbs
10 Paper	11 Lundy Island
12 Alexander the Great	13 Rats
14 Sugar	15 How Sugar is Made
16 The Moon	17 Living on the Canals

Once you have successfully logged in you will be taken to the 'My Library' screen, which displays all of the texts that have previously been added to your library. The texts are listed in alphabetical order.

If you want to add a new text then click on the plus (+) button in the top left hand corner of the screen. This opens up the device storage folder structure you can add any file to the reader that has a **.txt** ending (i.e. is a text file). If you wish to add new texts to the reader you can do this through your computer – please see separate instructions for doing this. The books we have pre-loaded onto the

tablets can be found in iLearnRW/Books. The "Fables" folder contains some extracts from Aesop's fables, the "Non-Fiction" folder contains a number of graded texts from Dyslexia Action.

The red button on the top left hand of the screen logs the user out of the reader.

If you wish to edit the title of a text or remove a text from your library then hold your finger on the title of the text (i.e. within the light blue box) and a menu will appear in the middle of the screen (see right). From this menu you can select 'edit' or 'delete'. The 'copy' option copies the text to the device storage.

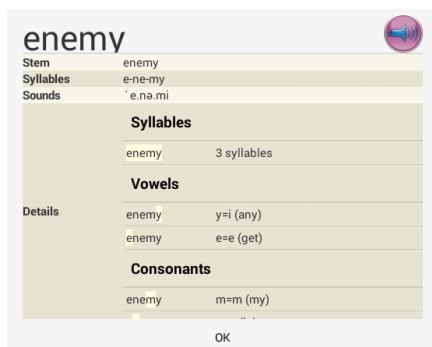

To read a specific text simply tap on the 'Open file' button under the text title. Selecting "Open with Annotation" will open the file with certain word segments highlighted depending on the annotation rules currently setup for that child. We discuss these presentation rules in more depth in section 1.5.

1.3 Reading Screen

When you open a text it will be displayed in the reading screen. From this screen you can return to the 'My Library' screen by clicking on the book icon in the top left hand corner. You can search the text for a particular word or phrase by clicking on the magnifying glass icon also in the top left hand corner.

You can scroll the text by swiping up the screen with your finger. To have the text read aloud press the play button at the bottom of the screen. You can control where in the text this start by tapping the sentence you wish to start with (which will become highlighted) and then pressing play. To skip through sentences or to go back to previous sentences you can use the back and forward buttons at the bottom of the screen.

You can also find out more information about a specific word by tapping and holding that word. This will bring up a pop-up box which gives you a breakdown of that words in terms of the stem, syllables, phonemes and highlights potential problems that could occur with that word. You can also hear the word spoken aloud by tapping on the sound icon in the top right hand corner of the pop-up. This will only occur if our dictionary contains the word you have selected.

If you wish to change how the text is displayed on this screen you can tap the settings icon in the bottom right hand corner.

1.4 Text Settings

Within the 'Text Settings' menu you can adjust the appearance of the text in reader. The Font size slider changes the size of the text, slide it to the left to make it smaller and slide it to the right to make it bigger. To change to font, tap on the Font face option and you are able to select from 5 different dyslexia-friendly fonts.

To adjust how much space there is between the lines of the text then tap on the Line spacing option and similarly you can adjust the space between individual letters by tapping on the Letter spacing option. You can also change the amount of space on either side of the text by tapping on the Margins option and selecting either Cozy (tight margins), Comfy (small margins) or Roomy (big margins).

You can select your preferred colours for the background, text and highlight (when text is being read aloud) by tapping on the coloured boxes next to each of these options. Use the colour bar on the right hand side to select a colour and then the bigger box in the middle to adjust the shade. The two boxes at the bottom show your original colour (left) and your new colour (right). If want to change to the new colour the tap 'OK' or if you want to keep the original colour tap 'Cancel'.

Finally you can adjust the speed and pitch of the voice that reads the text aloud by dragging each of the sliders to the left to make the speech slower or lower and to the right to make the speech faster or higher.

Once you have made all of your changes, they will be automatically saved. To go back to your text press the back button on the tablet in the bottom left hand corner of the screen and your new settings will have been applied to the text. If you are not happy with any of the changes you can go back and make adjustments by tapping the settings icon again.

If you wish to set all the settings back to the default, then simply tap the reset option at the bottom of the menu and select 'OK'.

1.5 Presentation Rules

Choose what to Highlight

Clear Highlighting Rules	All Highlights
Personal Recommendations	
Vowels Sounds / Sound 'a' as in 'cat'	
Vowels Sounds / Sound 'o' as in 'lot'	
Typical Highlights	
Vowels Long/Short	
Vowel Letters	
Vowels Sounds	
Suffixes (-ing, -s, -ed)	
Suffixes (-er, -ment, -less, -ness, etc.)	
Prefixes	
Syllables	

Within the 'My Library' screen you also have the option to adjust the presentation rules of the text. These allow you to customize who specific word segments and/or whole words are coloured or highlighted. For instance you can choose to highlight a specific letter combination, or a particular prefix or suffix.

To access this screen tap on the page icon in the top left hand corner of the screen. This screen shows you the "typical" rules that could be applied including long/short vowels, vowel letters, vowel sounds, suffixes (using the add, double, drop and change rules), prefixes and different syllable patterns. Selecting a difficulty area will drop down a list of specific highlights which can be applied (and if rules

for these difficulties already exist). The reader will also make some personal recommendations based on the student's user profile.

This screen also gives the option to clear all of the current highlighting rules (top left) or see the advanced options (top right).

Having selected a difficulty area to highlight, the following screen appears. This shows the specific rules that will be applied which can be turned on or off using the buttons to the left hand side. The options at the bottom of the screen control how the highlighting will appear within the text. Once you have made all of the changes you want, select "OK" at the bottom of the screen.

On the main screen there is an advanced option to view "All Highlights". This takes you to a system which gives complete control to create annotation rules for all of the linguistic difficulties the reader app can process. We are recommending that you use the "typical system" but have included a separate guide in the next section which details these advanced options.

1.6 Advanced Presentation Rules

Having accessed the advanced annotation system, the screen will look like the screenshot on the left. If there have been previously created presentation rules then they will be listed in the 'Active rules' screen (see left). To add a new rule simply tap on the 'Add New Rule' button at the top of the screen. You will then be able to use the category and problem drop down menus to find the specific difficulty that you want to be highlighted within the text – please see the instructions below for choosing the appropriate difficulty.

On the "Add New Rule" screen (see below left) you can select how you want the word segment associated with the selected difficulty to be coloured or highlighted within the text. You can select from the following options:

- Colour the problematic part of the word e.g. for suffix 'ing' in the word starting
- Colour the word containing the problem e.g. for suffix 'ing' in the word starting
- Highlight the problematic part of the word e.g. for suffix 'ing' in the word starting
- Highlight the word containing the problem e.g. for suffix 'ing' in the word starting

You can then change the annotation colour by tapping the colour square at the bottom and once you are happy with your new annotation rule tap the OK button to save.

Once you have finished creating your rule tap 'OK' to save it or to if you do not wish to save this rule tap on the 'Cancel' button. It will now be displayed on your list of active rules. If you wish to edit this rule at any point, you can adjust the colour/highlight options only by tapping the 'Edit' button underneath the rule description. You

cannot change the difficulty drop down menus. If you wish to do this then delete the rule by tapping the 'Remove' button and add a new rule with the adjusted difficulty.

The list of rules displayed on the 'Active Rules' screen will all be applied when the annotation mode is turned on within the reader. Therefore if you no longer want a rule to be applied you must remove it from this screen. The listed rules will include those set up through the standard "Typical Highlights" screen.

Choosing an appropriate difficulty

To create a new annotation rule you will need to firstly select a category of problem that you want to annotate within the text.

1. Consonants

This category includes single letter and double letter consonants as well as consonant digraphs and trigraphs.

2. Vowels

This category includes short, long and diphthong vowel sounds.

3. Blends and Letters Patterns

This category includes blends and letters patterns at the beginning, middle and ends of words, as well as specific vowel patterns and patterns including silent letters.

4. Syllables

This category includes closed and open syllables, vc/cv, v/cv, v/v and vc/v syllable splits as well as words with 2, 3, 4 or 5+ syllables.

5. Suffixes

This category includes suffixes that are added to words with no change, doubling a letter, changing a letter or dropping a letter.

6. Prefixes

This category includes prefixes that contribute to the meaning of the word (productive or that are common patterns at the beginnings (non-productive

7. Confusing Letters

This category include letter pairs that are often confused with one another.

Once you have selected a category the problem drop down list will be filtered to display on those problems associated within that particular category. A full detailed reference list for each of these problems can be found below, grouped by category. Please note for some problems e.g. the suffix '-ing' there are multiple entries for each of the different suffixing rule so you will need to use this list to double check the identification number to ensure you have selected the correct problem.
